Continuation of 11. does NOT place the application in condition for allowance because: The Applicant argues:

(1) The combined prior art of record does not teach virtual table.

The Examiner disagrees. The combination of Funderburk, Loaiza, and Guzman teaches virtual resource (i.e. "Alternatively, user-defined functions are registered with the database system to create "virtual tables" that create a view of data in the recovery logs. The user-defined functions dynamically retrieve and populate column values for a virtual table from underlying data sources." In the Applicant's specification, see page 3, lines 1-3, where the applicant defines a resource as "resource might be a database table, a Java.RTM. Bean, an Enterprise Java.RTM. Bean (EJB), a Java.RTM. object, a legacy application, a Web Service, a flat file, an eXtensible Markup Language (XML) file, etc." Therefore, the Examiner interprets virtual tables as virtual resource.)(Loiza, Column 5, lines 37-42)

- (2) The combined prior art does not teach or suggest connecting the actual resource to the at least one virtual resource. The Examiner disagrees. The combination of Funderburk, Loaiza, and Guzman discloses or suggests connecting (i.e. accessing at runtime)(column 2, lines 65-67; column 3, lines 1-6) the actual resource (i.e. underlying data source(s))(column 2, lines 65-67; column 3, lines 1-6) to an at least one virtual resource (i.e. virtual table)(column 2, lines 65-67; column 3, lines 1-6).
- (3) The combined prior art does not teach selectively manipulating the retrieved virtual resource by updating or deleting at least a portion of the retrieved virtual resource; and authoring the virtual resource into a logic code stored and executable by a computer to generate a second actual resource from the virtual resource.

The Examiner disagrees. The combination of Funderburk, Loaiza, and Guzman teaches selectively manipulating the retrieved virtual resource by updating or deleting at least a portion of the retrieved virtual resource (The tables in Guzman utilizes SQL language which includes the option of updating or deleting at least portion of the retrieved virtual resource. Therefore, this limitation is at least suggested by Guzman. In addition, updating and deleting the retrieved virtual resource is an intended use of manipulating the retrieved virtual resource.); and authoring the virtual resource into a logic code stored and executable by the computer to generate a second actual resource from the virtual resource (see column 10, lines 35-67).

All other arguments have been addressed in the Final Office Action, mailed 18 November 2009.
